

# GREEN UMBRELLA™ DRY SHIELD™

**Green Umbrella™ Dry Shield™** is an environmentally friendly concrete densifier that deeply penetrates and chemically reacts with concrete to create a floor surface that is harder, denser and less porous, while allowing for maximum penetration of concrete dyes. A clear, odorless solution, Green Umbrella Dry Shield does not require rinsing and removal, saving considerable time and money while eliminating hazardous waste disposal issues — significantly reducing your company's impact on the environment.

Green Umbrella Dry Shield is specially formulated for use in manufacturing & light assembly plants, warehouse/distribution centers, food service operations, retail stores & showrooms, parking decks, garages, airports, hospitals and any other areas where concrete surfaces are maintained.

## SAFER FOR THE ENVIRONMENT

---

Green Umbrella Dry Shield is a responsible alternative for professionals concerned about the environmental impact of densifiers and other concrete treatments. Unlike many traditional products, Green Umbrella Dry Shield is pH-neutral, compliant with all state VOC standards, and contains no sodium or potassium which can contribute to Alkali Silica Reaction (ASR). The harder, denser and less porous surface created by Green Umbrella Dry Shield means the substrate will stain less and wear longer, reducing maintenance frequency and extending the life of concrete and masonry.

## SUPERIOR FEATURES

---

- *Increases hardness and density, while reducing porosity*
- *Requires no rinsing & disposal and will not gel on surface — can be allowed to air dry*
- *Resists penetration by oils, chemicals and other stain-causing materials*
- *Decreases black tire marking from lift trucks and other equipment*
- *Stands up to heavy abrasion and foot traffic while providing excellent slip resistance*
- *Does not interfere with application of concrete dyes*

## EASY TO APPLY – SIMPLE TO MAINTAIN

---

Green Umbrella Dry Shield is used neat — no mixing required. Simply apply with a Green Umbrella recommended sprayer for coverage of up to 600 sq. ft. per gallon. Because of their reduced porosity and superior resistance to staining, maintaining surfaces treated with Green Umbrella Dry Shield requires nothing more than occasional damp mopping.

## DIRECTIONS FOR APPLICATION

---

For best results, air temperature must be above 35° F. New concrete should be fully cured for seven (7) days and free of all potential contaminants.

1. Apply Green Umbrella Dry Shield with a GreenUmbrella recommended solution spreader or sprayer.
2. Distribute product with an exploded-tip bristle broom to ensure uniform coverage.
3. Allow product to air dry. Green Umbrella Dry Shield will not gel on surface and does not require rinsing.
4. If above 95° F or windy during application, keep hydrated with water for one hour.
5. Remove any un-reacted material with a broom after product has dried.

## ROUTINE MAINTENANCE

---

- Thoroughly sweep all debris from floor.
- Auto-scrub or mop with GreenUmbrella-recommended, non-corrosive cleaning products.
